

Rapport Projet TLC

Réalisé par:

KADRI Noureddine

&

MERZOUK Fahim

Dans le cadre de ce projet nous allons découvrir la solution Platform as a Service (**PaaS**). Nous avons choisi **Google AppEngine** pour réaliser ce travail, nous utiliserons également la version d'essai de la plate-forme **Google Cloud Platform**.

Nous avons développé une application **Maven** dédiée au suivi de la condition physique d'une personne pendant qu'il court. Nous avons utilisé **Google Datastore** pour la persistance des données.

Afin d'interagir avec notre application, nous avons mis en place un service **HTTP REST** pour stocker, supprimer et rechercher un utilisateur qui a la possibilité d'enregistrer ses courses.

L'application enregistrera régulièrement le nom d'utilisateur, sa position (latitude et longitude), la date et l'heure du parcours (timestamp) et un identifiant unique qui identifiera une course spécifique.

Bulk Add: Chaque enregistrement créé sera directement envoyé au serveur. L'utilisateur pourra également enregistrer plusieurs courses à la fois.

Exemple:

Requete POST <https://infinite-bruin-224415.appspot.com/api/run>

Avec comme Body :

Exemple 1: une entité :

```
curl --header "Content-Type: application/json" --request POST --data
'[{ "id": 9, "lat": 48.8601, "lon": 2.3507, "user": "lea", "timestamp": 1543775727 }]'
"https://infinite-bruin-224415.appspot.com/api/run"
```

Exemple 2: quatre entités :

```
curl --header "Content-Type: application/json" --request POST --data
'[{ "id": 145, "lat": 47.8601, "lon": 2.8507, "user": "john", "timestamp": 154379267 },
{ "id": 145, "lat": 47.8631, "lon": 2.8517, "user": "john", "timestamp": 154379278 },
{ "id": 145, "lat": 47.8671, "lon": 2.8597, "user": "john", "timestamp": 154379267 },
{ "id": 145, "lat": 47.8721, "lon": 2.8637, "user": "john", "timestamp": 154379967 } ]'
"https://infinite-bruin-224415.appspot.com/api/run"
```

Search records: Les utilisateurs peuvent accéder aux informations des courses en sélectionnant n'importe quelle combinaison (Id, Timestamp, Location).

Exemple:

```
curl "https://infinite-bruin-224415.appspot.com/api/run?user=lea&timestamp=1543775726,1543775729"
curl "https://infinite-bruin-224415.appspot.com/api/run?user=john&id=145&loc=47.8601,2.8507"
```

```
curl "https://infinite-bruin-224415.appspot.com/api/run?id=145"
curl "https://infinite-bruin-224415.appspot.com/api/run"
curl "https://infinite-bruin-224415.appspot.com/api/run?timestamp=0,2000000000&id=145"
```

Bulk Delete: L'utilisateur peut supprimer plusieurs enregistrements en utilisant les identifiants des courses.

Exemple:

```
curl --request DELETE "https://infinite-bruin-224415.appspot.com/api/run/9,145"
curl --request DELETE "https://infinite-bruin-224415.appspot.com/api/run/13"
```

Afin de bien gérer nos données et les accès à la base sur le DataStore, nous avons défini des index, comme nous pouvons le voir sur l'exemple ci-après qui indexe l'Id et le TimeStamp d'un Record:

```
<datastore-index kind="record" ancestor="false">
  <property name="id" direction="asc" />
  <property name="timestamp" direction="asc" />
</datastore-index>
```

Analyses:

Tests effectués:

Nous avons testé notre application avec les fichier test.sh fourni comme suit:

./test.sh https://infinite-bruin-224415.appspot.com/api/run lon

Et voici les résultats:

```
Activités Terminal ven. 18:01
fmerzouk@fmerzouk: ~/workspace/TLC/hey

Fichier Édition Affichage Rechercher Terminal Onglets Aide
fmerzouk@fmerzouk: ~/workspace/TLC/tlc_project x fmerzouk@fmerzouk: ~/workspace/TLC/hey x fmerzouk@fmerzouk: ~/workspace/TLC/tlc_project x

fmerzouk@fmerzouk:~/workspace/TLC/hey$
fmerzouk@fmerzouk:~/workspace/TLC/hey$ ./test.sh https://infinite-bruin-224415.appspot.com/api/run lon
USE './test.sh https://infinite-bruin-224415.appspot.com/api/run long' command if you use 'long' and not 'lon' to represent longitude\n\n

Benchmark de l'application web déployé sur google app engine:

Technologies utilisées:

Pour analyser notre application et mesurer les performances de notre application web comme le temps de réponse moyen, le plus élevé et le plus rapide ...

Nous avons utilisé un outil de Benchmark des applications web qui est **Hey**.

Requêtes envoyées et résultats obtenus:

1) Première requête

Type de requête: POST

Nombre de requêtes: 4

Body de la requête:

```
[{"id":9,"lat":48.8601,"lon":2.3507,"user":"lea","timestamp":1543775727}]
```

Requête:

hey -n 4 -c 2 -m POST -d

```
"[{"id":9,"lat":48.8601,"lon":2.3507,"user":"lea","timestamp":1543775727}]" -T
```

"application/json" https://infinite-bruin-224415.appspot.com/api/run

Réponse :

Summary:

Total: 0.9435 secs

Slowest: 0.7266 secs

Fastest: 0.1998 secs

Average: 0.4634 secs

Requests/sec: 4.2393

Response time histogram:
